

CryoProbe for all skin abnormalities

Riana's Health Skin Care Clinic

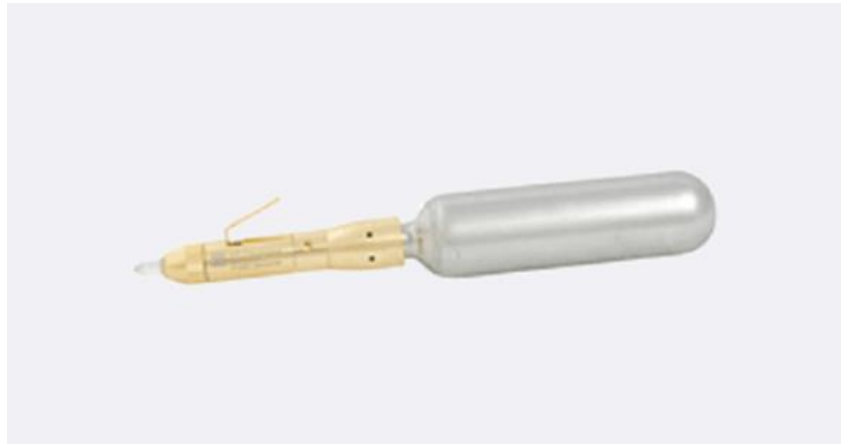

Rely on the quality of the CryoProbe for the effective removal of warts and other skin lesions. The CryoProbe is a brilliant device. It is practical, innovative and so easy and safe to use. Little to no preoperative skin preparation is required and postoperative care is unnecessary. With great patient acceptance the CryoProbe will directly relate to an increase in the number of cases treated.

BEFORE / AFTER

RAPID AND EFFECTIVE

The Cryoskin uses freezing technology to rapidly and precisely treat a wide range of minor and superficial skin irregularities, non-invasively. Remarkably compact and portable in size, the Cryoskin uses small, disposable cartridges of nitrous oxide (N₂O) to easily deliver quick, effective treatments with unsurpassed precision.

Skin irregularities treated with the Cryoskin include: age spots, hyperpigmentation, warts, keratoses, and fibromas. The Cryoskin can also be used to peel areas of skin and remove small areas of pigment for permanent make-up corrections around the eyebrows or lips.

Due to the Cryoskin's patented micro-applicator technology, unsurpassed pinpoint precision, accurate to the millimetre, can be achieved. Optimum results are evident 3-6 weeks post-treatment.

SIMPLE, PAINLESS, AND PRECISE

The Cryoskin treatment is easy to apply and relatively painless.

Two microapplicator/nozzle sizes ensure that treatments can be performed on large and small areas.

Due to the Cryoskin's patented micro-applicator technology, unsurpassed pinpoint precision, accurate to the millimeter, can be achieved. Optimum results are evident 3-6 weeks post-treatment.
